

## General

**How do I add a custom date format (yyyymmdd instead of yyyy-mm-dd) to the beginning of the filename? Tried using**

**"\*date[,yyyyMMdd]\*\*name\*.\*ext\*" as the default naming mask, but the file saves as "\_date[\_test.jpg" instead.**

Found an answer to my own question. Remove the braces. I.e. have "\*date,yyyyMMdd\*\*name\*.\*ext\*" as the mask.
