

User Interface

2 popup when one click download is turned off

Hi,

If someone could help me with this slight annoying issue that I've found - when one click download is turned off (I need to change the name for certain download batches) - the popup to start and name the file pops up twice... one on the tab from the page itself and the other in a NEW tab (which is extremely annoying) where the download manager page opens.

Is there any setting where I can change this? I'd have to kill one and then change tab, which I'm pretty sure is not supposed to happen

Thanks in advance!
