

General

How do I add a custom date format (yyyymmdd instead of yyyy-mm-dd) to the beginning of the filename? Tried using `"*date[,yyyymmdd]name*.*ext*" as the default naming mask, but the file saves as "_date[_test.jpg" instead.`**

Found an answer to my own question. Remove the braces. I.e. have `"*date,yyyymmdd**name*.*ext*" as the mask.`
